

Magic *Does* Happen

Being ever-sensitive to customer's comments, we were inspired to look for an even simpler version of the time-proven ionisation system and, after extensive field trials, subsequently, developed an ioniser which is based on a combination of our *Algae-NON* electrodes* and Lo-Chlor's non-chlorine sanitiser, *Aquacadabra***.

Feedback received from our customers indicates that our recently-released *New Millennium* ioniser performs particularly well, and pools which lacked the sparkle of a healthy pool, not only became crystal clear, but also exhibited a remarkable tolerance to indifferent maintenance and water chemistry - *not that we're suggesting for one moment that you abandon your routine maintenance regime*. Do so at your peril.

Ionisers have always been impervious to the effects of sunlight and temperature variations, and when combined with the qualities of our *New Millennium* variant, result in a simple, low-chemical solution to problems associated with maintaining healthy water in your swimming pools and spas. For pictures of this exciting new development in ioniser technology, visit "*Our Products*" on this website.

And remember, when comparing sanitising systems for your pool or spa, look for the **APVMA** approval or licence number. If it doesn't have one, ask yourself the question, "Are you prepared to put an unregistered product it in *your* pool?"

"If you wouldn't drink it, why let your children swim in it?"

* APVMA approval no: 60056/01/1005

** APVMA approval no: 57606/0603
